

VAMSHI KRISHNA EMMADI

Aspiring AI/ML Engineer | Python Developer

vamshikris25@gmail.com | +91 8688086325

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Recent B.Tech graduate in Computer Science (AI/ML) with hands-on experience shipping real products - a live full-stack Django food-delivery platform with real OTP verification, payments and GPS tracking, an agentic voice AI assistant, and an autonomous LLM-agent travel planner with real-time tool orchestration. Seeking a Python / AI Developer role where I can apply strong fundamentals and AI-agentic workflows to build scalable, real-world applications.

EDUCATION

CMR College of Engineering & Technology	June 2026
<i>B.Tech, Computer Science and Engineering (AIML)</i>	CGPA: 7.01
SR Edu Centre	August 2022
<i>Intermediate (MPC)</i>	Percentage: 78.9%
Srinivasa Ramanujan Concept School	June 2020
<i>10th Standard (CBSE)</i>	Percentage: 72.8%

SKILLS

Languages: Python, HTML, CSS

Frameworks & Libraries: Django, Flask, Streamlit

Agentic AI / LLMs: LLM Function Calling, Multi-Tool Agent Orchestration, AI Agent Workflow Design, Whisper (Speech-to-Text)

Databases: PostgreSQL, SQL

APIs & Integrations: REST APIs, Firebase Authentication, Google Maps API, Razorpay, Groq API, Webhooks

Tools & Version Control: Git, GitHub, Claude Code

PROJECTS

Food on Fire - Full-Stack Food-Delivery Platform | *Django, PostgreSQL, Razorpay, Firebase* | Live: foodonfire.in

- Built and deployed an end-to-end production platform (customer, restaurant, delivery-agent, and admin interfaces) that processed 50 live orders from 3,000 site visits in its first 4 days.
- Integrated Razorpay payments, Firebase OTP-only authentication, and live GPS order tracking via the Google Maps API.
- Diagnosed and fixed a production Razorpay webhook signature mismatch, securing the live payment flow.

Smart Trip Planner Agent - Agentic AI Travel Planner | *Python, Groq (Llama 3.3), Streamlit* | [GitHub](#)

- Built an autonomous AI agent that turns a plain-English trip request into a complete, budget-verified itinerary in ~8-10s by dynamically deciding which of 5 tools to call (flights, hotels, weather, local costs, budget check) via LLM function-calling.
- Eliminated LLM numeric hallucination by making tools deterministic and the single source of truth: the system computes all costs, producing reproducible, always-consistent budgets instead of model-guessed figures.
- Designed a two-panel Streamlit UI with a live agent-activity trace and progress states, exposing every tool call and decision for full transparency and auditability.

Jerry - Agentic Voice AI Assistant | *Python, Whisper, LLM Function Calling* | [GitHub](#)

- Built an always-on Windows voice agent with “Hey Jerry” wake-word detection (85% accuracy) and Whisper speech-to-text.
- Designed an LLM-powered tool-use loop that launches apps, drives the browser, and performs desktop tasks from voice commands.

LeadGen AI - B2B Lead Discovery Tool | *Python, Flask* | [GitHub](#)

- Developed an end-to-end AI lead-generation tool with user authentication and session management for personalized data storage.
- Built a Python backend that turns user parameters (service, target audience, region) into structured, high-accuracy leads with one-click Excel export.

ACHIEVEMENTS

- Led the organizing committee of “Nexus” E-Summit, a flagship entrepreneurship event featuring top startup founders and industry speakers, with 700+ participants and competitions with a Rs. 25,000 prize pool.
- Represented E-Cell IIT Bombay at CMRCET, promoting entrepreneurship and innovation through workshops, coding events, and startup-focused initiatives.
- Supported coding events, technical sessions, and student-led tech projects as part of the Innovation and Entrepreneurship Board.
